Una tonelada de papel reciclado equivale a salvar la vida de 17 árboles adultos.

Reciclar 03 botellas de vidrio, ahorra energía suficiente para cargar 318 veces un celular.

Fabricar productos de aluminio a partir del reciclaje requiere el 95% menos de energía que la necesaria para conseguirlos a partir del mineral.

El plástico: Cuando este material es reciclado se utiliza un 80% menos de la energía necesaria para producirlo.

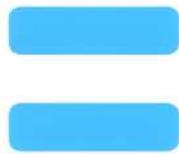

Al reciclar una tonelada de plástico, podemos ahorrar entre 1,000 - 2,000 galones de gasolina.

Al reciclar una botella plástica ahorramos la energía necesaria para mantener encendido un foco de 100 watts durante 4 horas.

Una pila de mercurio puede
llegar a contaminar
600.000 litros de agua.

Hagamos de todos los días,
el Día de la Tierra.
